

CM Labs' Excavator Simulator Training Pack: Operator readiness for today's job sites

CM Labs' Excavator Simulator Training Pack is an all-in-one solution for learning critical operator skills, including basic operations, advanced skills, worksite collaboration, and the latest operator assistance technology.

There's no simpler or safer way to prepare operators for the tools that are part of today's highly technical jobsites.

Prepare operators for new construction technology

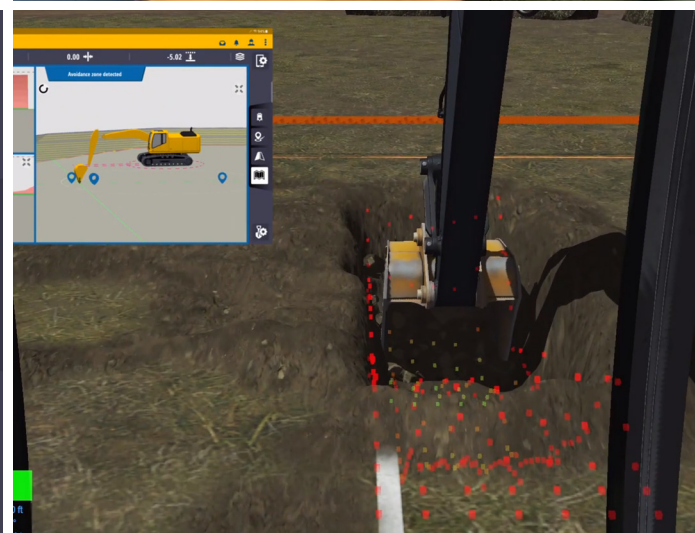

Now, with CM Labs' Excavator Simulator Training Pack, you can use the Trimble® Earthworks Grade Control Platform, running on a tablet connected to the simulator.

All positional information within the simulation is communicated directly to Trimble Earthworks, via precision sensor data captured within the exercise scenario, backed by CM Labs' industry-leading realism.

Trainees learn how to use the visuals overlaid onto the existing ground along with cut/fill information, slope data and other customizable reference points that provide a better understanding of the work that needs to be done.

By conditioning operators to focus on real-time data, you get them ready to handle the technology that's been designed to drive safer, more productive operations.

Now available on CM Labs' Excavator Simulator Training Pack, Trimble Earthworks is coming to the Dozer Simulator Training Pack and Grader Simulator Training Pack in the first half of 2022.
